

Network Module creates networking infrastructure

```
● tpappaia@GQXK2J4QRC terraform % terraform init
Initializing the backend...
Initializing modules...
- network in modules/network
Initializing provider plugins...
- Finding latest version of hashicorp/aws...
- Installing hashicorp/aws v5.97.0...
- Installed hashicorp/aws v5.97.0 (signed by HashiCorp)
Terraform has created a lock file .terraform.lock.hcl to record the provider
selections it made above. Include this file in your version control repository
so that Terraform can guarantee to make the same selections by default when
you run "terraform init" in the future.
```

Terraform has been successfully initialized!

You may now begin working with Terraform. Try running "terraform plan" to see any changes that are required for your infrastructure. All Terraform commands should now work.

If you ever set or change modules or backend configuration for Terraform, rerun this command to reinitialize your working directory. If you forget, other commands will detect it and remind you to do so if necessary.

```
● tpappaia@GQXK2J4QRC terraform % terraform validate
Success! The configuration is valid.
```

```
